YEAR: **1st Year**

SUBJECT: **DIGITAL LITERACY**

INSTITUTION: **VIT BHOPAL UNIVERSITY**

DATE: **26 MARCH 2026**

INTRODUCTION

This project was completed as part of the Digital Literacy course, where I took on the role of a Student Digital Ambassador. The aim of this project is to understand and promote digital awareness among students. In today's world, digital literacy is essential for academic success, professional growth, and safe online behavior.

Through this project, I explored various digital tools, platforms, and communication methods. I also learned about the importance of maintaining a professional online presence and protecting oneself from cyber threats. Each task helped me gain practical knowledge about how to use digital technologies effectively and responsibly.

TASK 1 – DIGITAL LITERACY AWARENESS INFOGRAPHIC

I created a Digital Literacy Awareness Infographic using Canva, which is an online design tool that offers a variety of templates and design elements. The infographic covers key topics such as the definition of digital literacy, safe internet practices, useful digital tools for students, and the importance of maintaining a professional online presence.

While designing the infographic, I focused on presenting the information in a clear and visually appealing way. One of the challenges I faced was organizing all the content into a single page without making it look cluttered. However, Canva's templates made it easier to structure the design. This task helped me understand how important it is to spread awareness about digital literacy in a simple and effective manner.

TASK 2 – STUDENT DIGITAL PORTFOLIO

In this task, I created my digital portfolio using three platforms: GitHub, LinkedIn, and Stack Overflow. GitHub is used to host and manage coding projects, allowing developers to collaborate and track their work. LinkedIn is a professional networking platform where I added my educational details and created a profile to connect with others. Stack Overflow is a platform where developers can ask questions and find solutions related to programming.

Creating these profiles helped me understand the importance of having a professional online presence. Over the next four years, I plan to upload my projects on GitHub, build connections on

LinkedIn, and use Stack Overflow to improve my problem-solving skills. These platforms will help me prepare for internships and future job opportunities.

TASK 3 – CODING & COLLABORATION PLATFORMS

In this task, I explored coding and collaboration platforms. I used HackerRank to solve a beginner-level problem, which helped me understand how coding platforms work and how they improve problem-solving skills. It was a useful experience for developing logical thinking and basic programming knowledge.

I also created a Google Form titled “Digital Literacy Awareness Quiz” to test students' understanding of digital literacy concepts. The form included multiple-choice and short-answer questions, and responses were collected using Google Sheets. This tool is very useful for collecting and analyzing data efficiently. These platforms will help me in my academics by improving my technical and analytical skills.

TASK 4 – PROFESSIONAL EMAIL & ETIQUETTE GUIDE

Poor digital communication can lead to misunderstandings and serious problems. For example, if a student sends an email to a professor without a proper subject line or uses informal language, the message may be ignored or considered unprofessional. This can affect communication and academic performance.

By completing this task, I learned the importance of writing clear and professional emails. Proper email etiquette includes using a suitable subject line, polite language, and a structured format. I also learned about responsible social media usage and how it impacts a person’s digital reputation.

TASK 5 – CYBERCRIME AWARENESS CASE STUDY & PREVENTION GUIDE

While researching cybercrime, I was surprised to learn how easily people can be tricked into UPI fraud. Many individuals are not aware that approving a payment request can result in money being deducted from their account instead of being credited.

This task made me more aware of the importance of digital security and safe online practices. One habit I will change is being more cautious when receiving unknown calls or messages related to banking. I will ensure that I never share OTPs or approve unknown payment requests in the future.

CONCLUSION

This project helped me gain a better understanding of digital literacy and its importance in today's world. I learned how to use various digital platforms effectively and responsibly. From creating an infographic to understanding cybercrime, each task provided valuable knowledge and practical experience.

Overall, this project has improved my awareness of digital tools, communication skills, and online safety. I believe these skills will be very useful in my academic journey and future career.
